Generic moxidectin injectable solution

Norbrook has added Tauramox™ (moxidectin) Injectable Solution to its portfolio of cattle health products available to North American producers and veterinarians. The product is the first generic Cydectin® Injectable Solution available for the treatment of a broad range of internal and external parasites that affect the health and performance of beef and non-lactating dairy cattle (under 20 months of age).

Ready-to-use, Tauramox contains 1% moxidectin and is labeled to control adult and certain larval forms of 12 types of roundworms, including the more devastating *Ostertagia* species; lungworms (*Dictyocaulus viviparus* adults and L4); grubs (*Hypoderma bovis* and *lineatum*); mites [*Psoroptes ovis* (*P. communis* var. *bovis*)]; and lice (*Linognathus vituli* and *Solenopotes capillatus*). The product provides up to 42 days control of *D. viviparus* and *Oesophagostomum radiatum*; 35 days of control of *Haemonchus placei*; and 14 days control of *Ostertagia ostertagi* and *Trichostrongylus axei*.

Tauramox has a 21-day pre-slaughter withdrawal, and producers can expect the same weight gain advantage as with Cydectin Injectable.

Tauramox is approved for use in beef cattle 8 weeks of age and older, and in non-lactating dairy cows 8 weeks to 20 months of age. It is not approved for use in veal calves.

It is available in 500-mL bottles.

Disc header for self-propelled windrowers

New Holland Agriculture North America introduces the Durabine™ 413 Plus disc header for Speedrower® Plus Series self-propelled windrowers. The new header features a cut width of 13 feet (ft.) 1 inch (in.), offering customers a new head size option to choose from to fit their needs. It also provides greater maneuverability, fast dry-down time and close cutting.

Built in New Holland, Penn., the Durabine 413 Plus disc header features the same cutter bar and conditioning systems featured on the Discbine® 313 Plus center-pivot disc mower-conditioner.

With a cutting width of 13 ft. 1 in., the MowMax™ II Plus modular cutter bar delivers the cleanest, closest cut yet from New Holland. To ensure as much crop is cut as possible, a cutting height

as low as ½ in. is achievable. To save customers' valuable time, the QuickMax™ knife-change system is standard, along with the ShockPRO™ hubs for added protection. As a result of its size, the Durabine 413 Plus has an overall width of just 13 ft. 6 in.

From the cutter bar, crop is transferred directly into a 125-in.-wide chevron-pattern steel or rubber roll conditioning system without requiring an auger.

Easy access to the cutter bar and drive components eases maintenance. Like a Discbine® 313 Plus center-pivot disc mower-conditioner, the Durabine 413 Plus also has poly bifold upper shields that are easy to lift and impact-resistant to avoid dents from foreign objects. The roll drive door is made from durable poly and has a steel plate at the bottom for added protection. Material overlap keeps the curtains in place without clips or magnets.

Feed management platform options to optimize resources

Topcon Agriculture announces advances in its Tap Feed

management cloud-based software platform for dairy and beef operations. Platform options now include the free Tap Feed App, and the subscription-based Tap Feed Lite and Tap Feed Pro for dairy producers. For feed advisors, consultants and nutritionists, the new Tap Feed Advisor customer management tool is also now available.

Tap Feed integrates feed management software with feed mixer scales. Feed mixers efficiently combine ingredients, forming a total mixed ration (TMR). Mixer weighing systems allow users to manage and track feed loads to improve efficiency, reduce waste and support calculated management strategies.

Two new add-ons are also available, one providing the ability to connect Tap Feed subscriptions to third-party feed management and technology, such as herd management and feed suppliers. The other add-on is an advanced inventory manager allowing users to manage and track feed inventory, including input ordering features, ingredient and inventory management, re-ordering systems, inventory alerts and reports.

Learn more about Tap Feed at www.topconpositioning.com. View a video on Tap Feed Lite at www.vimeo.com/topcon/tapfeedliteoverview. ABB

Durabine 413 Plus disc header for Speedrower PLUS Series
